

GWU InnovationFest Poster Plan

Date: April 6, 2026

Format: 3ft × 4ft portrait (36" wide × 48" tall)

Tool: Canva

Tool Recommendation: Canva

Canva is faster to iterate, easier for students to collaborate on, handles images and diagrams without friction, and produces a more polished result for a public-facing demo event than a typesetting tool like Typst.

Brand Colors

- **Navy:** #0D3B66
- **Orange:** #EE964B
- White background for body sections

Section-by-Section Content Guide

HEADER — 36" wide × 7" tall

- **Title:** LucidLedger
- **Subtitle:** *Blockchain-Backed Wage Protection for Global Workers*
- **Tagline (smaller):** *Putting wages in escrow before work begins — making wage theft structurally impossible*
- GWU logo + "InnovationFest 2026" in small text

THE PROBLEM — 18" wide × 16" tall

Pick 3–4 of the most striking stats. Each as a large number + one line of context. No paragraphs.

\$11.85 billion in wages and severance went unpaid in the global garment sector during COVID alone.

~**58%** of covered workers in Sub-Saharan Africa are paid below the legal minimum wage.

170 million migrant workers face recruitment fee exploitation — the most common form of forced labor in global supply chains.

In Nigeria, only **1% of workers** who experience wage violations pursue legal recovery.

HOW WE SOLVE IT — 18" wide × 16" tall

Short bullets only:

- USDC wages held in smart contract escrow **before work begins**
- Work completion verified by **configurable oracles**
- On-chain **dispute resolution** via neutral mediator
- Workers need **no crypto knowledge** — no ETH, no wallet setup required
- Gas-free transactions: **platform sponsors all fees** via Account Abstraction

SYSTEM FLOW DIAGRAM — 24" wide × 14" tall

The Mermaid source below is the authoritative draft. To render it:

1. Go to <https://mermaid.live>
2. Paste the code block below into the editor on the left
3. The diagram will render on the right — click the download button to export as SVG
4. In Canva: Insert → Upload → select the SVG file

SVG exports from mermaid.live are crisp at any print size.

Use the diagram below for both the poster and the website (`NewAbout.jsx`) — see `website-content-critique-2026-04-06.md` .

Full version (for website and poster)

TECH STACK – 12" wide x 14" tall

Layer	Stack
Frontend	React, Vite, Tailwind CSS
Backend	Node.js, Express, PostgreSQL
Database	AWS RDS (PostgreSQL)

Layer	Stack
Blockchain	Base L2, Solidity, USDC
Auth	Privy (email, phone, wallet)
Payments	USDC + Account Abstraction (Coinbase Smart Wallet)
Infra	Docker, nginx, GitHub Actions CI/CD

FOOTER — 36" wide × 11" tall

Left or center: large scannable QR code (at least 3" × 3"), URL printed below, and demo instructions:

Sign in with your email, browse posted jobs, and submit an application.

This is a demo environment — feel free to explore.

Below that:

github.com/worker-dapp/lucidledger · ejt@gwu.edu

Key Items to Confirm Before Students Start

1. **QR code** — Make sure it works and points to the <https://lucidledger.co> before printing
2. **Flowchart** — render the Mermaid diagram at <https://mermaid.live> or some similar site and export as an image (SVG or PNG); make sure it looks good before printing
3. **Demo accounts** — pre-create a sufficient number of active job postings and fund with test USDC so walk-up visitors have something to apply to
4. **Print timing** — confirm print timing with library, submit in time for April 30 session

What NOT to Do

- Do not crowd sections with paragraphs — every section should be skimmable in under 10 seconds

- Do not make the QR code small — it should be the most-used element at the booth
